

Fulvi PlusTM

A new concept for young calves

Fulvi Plus™ is a unique concept especially formulated to help the young calves. It contains a unique mixture of phytogenic ingredients, specifically formulated to support gut health. Calves are particularly susceptible to intestinal problems during the first weeks of life, as their immunity and gut microbiota are not yet fully developed and several stressors can occur. It is therefore important to support the young calf preventively from the start, as early growth has a major impact on later production performance.

Improves gut health

It strengthens the intestinal barrier and reduces intestinal inflammation.

Improves growth

Several studies showed a significant increase in growth of more than 50 grams/calf/day in the first 14 days (which will have a positive effect on future production performance).

Improves nutrient uptake

Ingredients in Fulvi Plus™ have a chelating effect, which will improve the absorption of nutrients.

Improves fecal score

Active ingredients in Fulvi Plus™ are known to improve fecal scores in young animals.

Conclusion

Fulvi Plus™: optimal support for the gut, resulting in a more robust calf with an improved daily growth.

Application: The advice is to give 2x5 ml/calf/day of Fulvi Plus™ (or 2x1,5 g/calf/day Fulvi Plus™ SD) for at least the first 14 days of life, directly in the milk or milk replacer. For optimal prevention give it up to 100 days and increase the dose to 2x10 ml/calf/day of Fulvi Plus™ (or 2x3 g/calf/day Fulvi Plus™ SD).

Jadis makes the difference

- Jadis Additiva has more than 25 years of experience in the field
- Delivering reliable, innovative, safe, science-based additives and services
- High quality products, GMP+ certified
- Tailor made solutions

Please feel free to contact us for an appointment to discuss the benefits and potential of Fulvi Plus and how to include it as part of a balanced diet.
